

Family Member Testing

In an effort to support our employees, Shodair is offering free Covid testing for family members. This testing is intended for situations where a family member is symptomatic, a known close contact, or has been told to stay home from work or school and cannot return without a negative test. It is not intended for general asymptomatic surveillance. Your cooperation with this will allow us to continue to return results in a timely fashion.

By submitting a sample from a family member, you certify that you are legally allowed to make medical decisions if the subject is a minor or have the permission of adult family members to submit their samples. You also understand that all results must be shared with the Montana Department of Public Health and Human Services. Positive results will result in notification of local county health offices and contact tracing.

To submit a sample from a family member, you can either fill out the form at this link **while onsite and on a computer connected to Shodair's network:**

<http://192.168.30.200/covid.php>

OR

Use this link to submit a sample from offsite. **Please note this link will require you to log in with your Shodair username and password.**

<https://forms.office.com/r/EpXrSUD9Lb>

Both methods are secure. Collection kits are available at the front desk or at the nurse's stations on the units.
